As I write this, I am still reflecting upon the recent American Junior Simmental Association National National Classic in Tulsa, Oklahoma, which in my mind was one of the most successful to date. I was in attendance for the duration of the much-anticipated event, and had the opportunity to support various

events throughout the week, including the American Simmental-Simbrah Foundation Breeders Cup Golf Tournament, assist in exhibiting the Simbrah heifer class in the judging contest, and also helped line up cattle for numerous shows. I want to thank the ASA staff (and their families as well), sponsors, and volunteers for their efforts in creating numerous opportunities for the AJSA members throughout the week. Last, but certainly not least, a big, hearty thanks to the families who attended the Classic in Tulsa.

This year, the ASA teamed up with Neogen and offered a free DNA clinic in Tulsa, as well as the option for AJSA members to have their cattle's DNA collected for parentage at no charge. This program was a success with hundreds of samples collected — we appreciate everyone who participated or made it possible. As I took in the week, in particular at the awards banquet, I was inspired by the energy and constructive collaboration from the AJSA Board of Trustees down through the members who enthusiastically received their award(s) for the work they had put in to prepare for these various leadership-oriented contests. I am a proud product of the AJSA program and credit the experience — as well as those who made it possible — for much of my success. If you have not made it to an AJSA Regional or National Classic, I encourage you all to do so in 2025.

As I write this, we're looking ahead to staying in the South Central region for Fall Focus in Amarillo, Texas, August 23–27, 2024. Fall Focus is also one of ASA's premiere events and is shaping up to be another fun and educational gathering for beef producers in the setting of the Texas Panhandle. ASA Board of Trustee meetings are also scheduled after the conference, and we invite you to stay and join us as we discuss the business of the Association. Speaking of business, the demand for SimGenetics appears to have remained strong since my last Trustee Viewpoint as sale reports trickled into *the Register* from across the country. Personally, I attended the Back to Grass Sale in Henderson, Texas, this past spring and the diverse SimGenetic offering was well received by an enthusiastic crowd. Congratulations to y'all on creating this strong consumer demand for SimGenetics that we are currently experiencing, and I wish your operation continued success.

Finally, I would like to thank my fellow members who have given me this opportunity to serve the ASA, as it is an honor to give back to an organization that introduced me to one of my key pursuits in life, which is breeding SimGenetics. I would also like to express my gratitude to Dr. Wade Shafer for his commitment to SimGenetics and all that he has accomplished along with his team during his tenure with ASA. As we progress, we will work diligently to sustain ASA's success to this point while pursuing innovative ways to expand SimGenetics' thumbprint in the beef industry. Take care and I hope to see you at Fall Focus or an ASA event soon. ■

by Dr. Wade Shafer, ASA EVP

This is my first *Register* writing assignment since announcing my upcoming retirement back in May. Since then, I've had several people wish me well in future endeavors. I certainly appreciate the sentiment. I also had one fellow send an email stating "it's about time." I appreciate that sentiment too!

As I've said many times in the past, growing up in Minnesota with Simmental (ASA #1740), coming to work for ASA was like being drafted by the Minnesota Twins — with the main difference being that ASA consistently wins! I'm also fond of saying that when I moved from my old job to my current job at ASA it was like transitioning from playing for the team to coaching it; I've never felt comfortable with the designation of boss, I've always seen myself as more of a coach.

I don't know how beneficial my tenure has been for ASA, but I can tell you I feel greatly blessed for the opportunity to have served my home team. After dispersing my cow herd and seriously considering opportunities outside the cattle industry, I came out to Bozeman at the request of my old coach, Jerry Lipsey. (Jerry never liked the word boss either.) In the beginning, it was just going to be a temporary gig to do some "science stuff." In the end, ASA would encompass the last half of my career. I will be forever indebted to Jerry for convincing me to join team ASA.

It's fair to conclude that ASA has been blessed — blessed in too many ways to enumerate in this short blurb. Since I'm restricted on space, I'll cut right to what I feel to be ASA's greatest blessing: the service of the most loyal and dedicated staff in the history of breed associations. As testament, over our relatively short existence ASA has had eight employees who have served us for 30-plus years. I suspect that level of commitment to be unprecedented in our industry. The employees are Steve McGuire, Linda Kesler, Dan Rieder, Marilyn Roth, Nancy Chesterfield, Linda Harris Bakken, Jim Largess, and Cynthia Conner. (Between full- and recently part-time service, Steve McGuire has contributed for over 51 years!) It has been the privilege of a lifetime to have worked with all of them. In honor of their length of service, these employees will have their portraits hung at ASA headquarters. Certainly, many others have given "hall of fame" level contributions, but we would run out of wall space if we honored all who were worthy.

Understandably, only two of those longtime employees are still working full-time for ASA. Fortunately, we have had a large and stellar draft of young people fill ASA's ranks over the last decade. Given our outstanding staff, I am very confident that ASA will continue to be a leader in the seedstock industry — I look forward to cheering on my home team for years to come! ■

ASA Partners *with* Neogen *to* Offer **DNA Testing** *at the 2024 AJSA National Classic*

by ASA Staff

ASA and International Genetic Solutions (IGS) maintain a steadfast commitment to utilizing and improving the science and technology available to producers. DNA testing has become standard practice for many seedstock producers, and thanks to an initiative by the ASA Board of Trustees, is now a tool the next generation knows about.

In collaboration with Neogen Inc., all animals exhibited at the 2024 AJSA National Classic in Tulsa, Oklahoma, were eligible for a complimentary GGP100K (high-density) genomic test, which includes parentage verification. The initiative was designed to educate junior members on the importance and value of DNA testing in the beef industry, as well as stimulate the collection of valuable genomic information. As a result, over 400 DNA samples were collected.

On Thursday, July 11, AJSA members and their parents gathered for a DNA collection demonstration. Representatives from Neogen and ASA shared about the benefits of DNA testing, and demonstrated on live animals how DNA samples are collected. Neogen provided all of the tissue sampling units (TSU) and hair cards used to collect samples.

Following the demonstration, ASA staff teamed up with the ASA Board of Trustees to travel through the barns, asking AJSA members if they would like to have their animals tested. Making sure AJSA members and their parents were aware of the free testing and collecting samples was the goal, but beyond that, it allowed young members to meet and talk with ASA leadership. Lane Giess, ASA Geneticist, helped gather samples. “It was great to see ASA staff, trustees, and members working together to educate juniors and help them understand the utility of science in the beef business,” he shared.

Each sample tested will return valuable genomic information to AJSA members, verifying the parentage of their animals, and accelerating their genetic knowledge. A genomic test is the equivalent of having at least 25 actual

Exhibitors at the National Classic were given the opportunity to receive a high-density genomic test on animals entered in the show.

ASA's Chip Kemp explaining DNA sample collection.

progeny records for growth traits, and 10 for terminal traits. This data will help young producers make breeding decisions, and will also have a positive impact on the entire population. "Animals that receive genomically enhanced prediction drastically improve the accuracy of their expected progeny differences (EPD) values, which in show cattle is generally a challenge due to smaller contemporary groups and fewer registered progeny," Giess explained.

Additionally, the testing includes parent verification. An inherent challenge in animal breeding is assigning a sire to progeny, especially when artificial insemination and natural service breeding are used in tandem, or multiple sires are used in a single breeding pasture. The reality is that mistakes happen and there can be discrepancies between the listed sire/dam and the actual sire/dam of an animal, and through DNA testing, parentage can be confirmed if parents themselves are genomically tested. The ASA requires that any donor female or AI sire must be genomically tested with at least a 100K high-density DNA test for any progeny to be registered. This improves the integrity of the registry, and in the case of the National Classic, improves the integrity of the show. This means that every animal tested through the DNA collection event at the National Classic will also be certified as either an AI sire or donor dam.

Chris Ivie, Chairman of the ASA Board of Trustees, was in the barn, talking with AJSA families and collecting DNA samples. Introducing young people to technology

like TSU sampling was an important part of the initiative. "Once people saw how simple it is to collect a TSU, they were on board," he shared.

Interacting with AJSA families was a highlight for Ivie. "I have been a part of many events, and I've never seen the engagement that was on display. Every exhibitor and their families had the opportunity to interact with trustees and staff members," he shared. "They had opportunities to ask us anything they wanted to, and we were able to explain the DNA process and answer their questions."

Giess echoed this, pointing out that over half of the animals entered at the National Classic were sampled. "To say the DNA collection event was a success would be an understatement. Almost 60% of all animals at the show were enrolled in the program, and the ability to go down the aisles, visit with juniors and their families one-on-one and talk about science was incredible," he concluded. "The DNA collection program was met with a ton of enthusiasm and the reception confirms that the ASA is truly the 'Science Breed.'" ■

Female Fertility and Culling Decisions

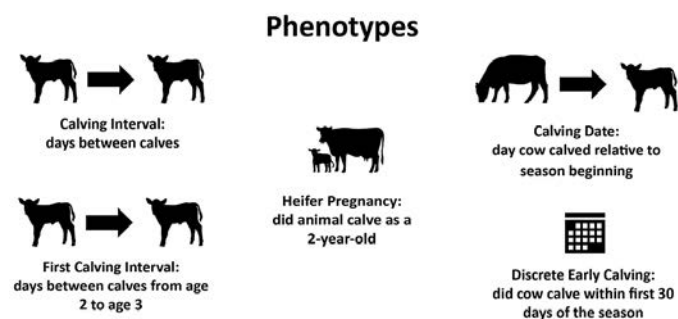

by Cassidy Catrett and Dr. Troy Rowan, University of Tennessee

Recent research funded by the Walton-Berry Graduate Student Support Grant used Total Herd Enrollment data to explore fertility and trends in culling decisions.

Cow longevity is the chief driver of economic success in cow-calf operations. An inability to rebreed is the most common reason that beef cows are prematurely culled from herds. Phenotypes associated with increased cow fertility and longevity are known to be under lower levels of genetic control. However, selection tools in the form of EPD can help accelerate progress on cow fertility by focusing selection on the modest genetic variation that controls these traits. Measuring these phenotypes at the population level is challenging with conventional data recording schemes. Further, many of these phenotypes take multiple years to be fully expressed, making phenotypic selection ineffective at generating rapid genetic improvement. Inventory-based reporting systems require production records on all females in a herd, regardless of calf survival or registration. This type of reporting framework has allowed breed associations to collect complete and unbiased reproductive and performance phenotypes from entire herds.

As a part of an ASA Walton-Berry Award, our group at the University of Tennessee has used ASA's Total Herd Enrollment (THE) records to explore the phenotypic and genetic variation of multiple traits related to heifer and cow fertility. We calculated five traits associated with early and sustained cow fertility: calving interval (days between calves), first calving interval (days between a cow's first and second calves), calving date (when, relative to contemporaries, did a cow calve), discrete early calving (did a cow calve within the first 30 days of contemporary group), and heifer pregnancy (did a female conceive during first breeding season) (Figure 1). We found that most animals in ASA's THE herds maintain a calving interval of less than 400 days. However, there was a slight increase in observations around the two-year, or 730-day mark, indicating that a non-negligible number of females are retained after a missed calving opportunity. The mean calving date for heifers in the data set was day 19, while it was day 32 for mature cows. This discrepancy in values is likely due to increased use of estrus synchronization and advanced reproductive management in heifer contemporary groups. We know that the first calving season is essential for setting up an animal for reproductive successes later in life, and this showed up clearly in the THE dataset. We found that

heifers that calved in the first 30 days of their contemporary group's calving season calved an average of ten days earlier than those that calved outside of the first 30 days (average calving date = 29.9 days vs. 40.2 days).

Definitions for cow fertility phenotypes.

THE data also allowed us to better understand how attrition occurs in this population. As expected, we observed a steady decline in the number of animals over the course of their lifetimes. Most records in the dataset were from females less than seven years old. Only 25% of eligible cows in the dataset had reached their age seven enrollment without missing a calf. Using the THE disposal codes, we found that the largest culling happened at two years of age due to heifers being open. Beyond this time point, rebreeding failure remained the most common reason for removal from the herd.

The unbiased reporting required in THE allowed us to understand culling decisions and cow attrition at the population level. Most seedstock Simmental producers maintain close to a 365-day calving interval on average, but it'll take work to maintain that. Calving date for heifers was predictive of future reproductive performance. Each of these phenotypes was lowly to moderately heritable, ranging from about 0.05 to 0.15. These phenotypes also showed low-to-moderate phenotypic and genetic correlations with one another. This suggests that genetic improvement is possible for these traits if breed associations develop genetic evaluations and genetic selection tools for them. We are continuing work with this dataset to identify associated markers with these fertility traits through sequence-imputed genome-wide association studies. ■

Cassidy Catrett grew up on her family's farm in Luverne, Alabama, where they raise Shorthorn cattle alongside a crossbred commercial herd. She received dual bachelor's degrees from Mississippi State University in animal science and poultry science. She recently completed a MS in animal science at the University of Tennessee, and remains there today as a Graduate Research Assistant while pursuing a PhD in animal science.

Dr. Troy Rowan is an assistant professor and state Extension specialist at the University of Tennessee Institute of Agriculture Genomics Center for the Advancement of Agriculture. His research uses genomic and computational approaches to understand the biology that underlies a wide range of complex traits in beef cattle. He is particularly interested in local adaptation, heterosis, novel phenotype creation, and genomic approaches to increasing beef cattle sustainability.

Simple Marketing, Effective Results Business Card Ads

Grab the opportunity

- Build your brand's voice.
- Reach a bigger audience.
- Get more traffic, visibility, and sales for your business.
- Keep your name in front of customers.

Bonus

- Your business card ad will be displayed alphabetically by state, making it easy for customers to find you.
- Sale dates listed on business card ads will automatically be included in Datebook.
- Business name included in the Ad Index each issue.

The American Simmental Association

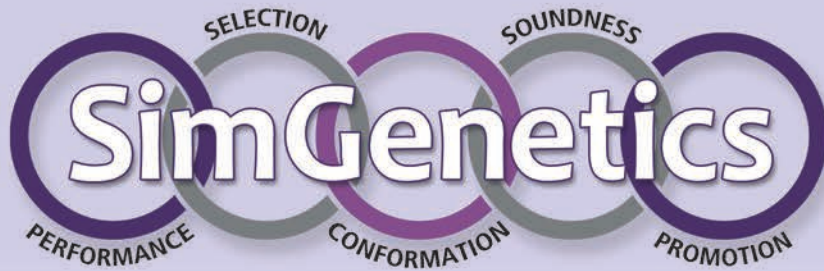

is proud to sanction high-quality Purebred Simmental, Fullblood Simmental, Percentage Simmental, and Simbrah Progress Through Performance (PTP) shows throughout the country. The PTP program is designed to promote multi-level progress within the SimGenetics industry. PTP shows effectively combine the assessment of statistical data, such as EPD and actual measurements, with traditional phenotype evaluation.

PTP Judges

PTP approved judges have been deemed as respectable and knowledgeable cattle evaluators by the ASA Board of Trustees Activities & Events (A&E) Committee. View the PTP approved judges list at: www.simmental.org.

ASA PTP RING OF CHAMPIONS 2024-2025

Only the Major PTP Shows involved in the National Show rotation are eligible for ASA PTP RING OF CHAMPIONS 2024-2025.

Shows include: 2024 American Royal
2024 North American International Livestock Exposition
2025 Cattlemen's Congress
2025 National Western Stock Show
2025 Fort Worth Stock Show
2025 Dixie National Livestock Show

Award Divisions

- ◆ Purebred Simmental Female and Bull of the Year
- ◆ Percentage Simmental Female and Bull of the Year
- ◆ Simbrah Female and Bull of the Year
- ◆ Percentage Simbrah Female and Bull of the Year
- ◆ Fullblood Simmental Female and Bull of the Year

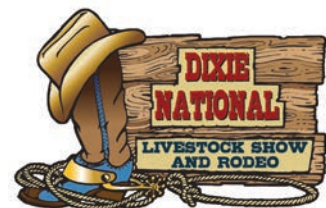

*If fewer than four animals earn points at multiple events, no winners will be recognized.
If fewer than three shows recognize a breed division, that division will be excluded.*

Qualifications

- ◆ Exhibitors must be active members in good standing with the American Simmental Association
- ◆ Animals and their exhibitors must abide by the rules of the show(s) in which they participate
- ◆ All ASA Ring of Champions award winners must at a minimum complete an ultra-low density DNA test before awards are given

2024 Beef Improvement Federation Symposium • Knoxville, Tennessee

by Jackie Atkins, director of Science and IGS Operations

Volunteers, *Shark Tank*-inspired innovators, technology enthusiasts, lots of International Genetic Solutions (IGS) representation and love, and a magnetic comradery among beef cattle enthusiasts peppered the Beef Improvement Federation (BIF) meetings this summer.

We were hosted on-campus at the University of Tennessee's brand-new Energy & Environmental Science Research Building and Brehm Animal Science Building. Dr. Rowan and the University of Tennessee faculty, staff, and students gave a warm welcome to a large crowd of approximately 500 BIF attendees. This year marked a new BIF program that encouraged graduate students to put together an innovative sales pitch to improve beef cattle genetics, similar to the popular TV show *Shark Tank*. There was also the addition of poster presentations, which was a great way to see several graduate student research programs highlighted. These additions drew more graduate student participation and added a lively feeling to the packed BIF schedule.

The Red Hill Farms operation of Lafayette, Tennessee, with the Jones family, was honored as 2024 Seedstock Producer of the Year. A much-deserved honor to a data-centric and science-focused seedstock operation.

Ryan Boldt, IGS Lead Geneticist, presenting at the 2024 BIF Conference.

Congratulations to the Jones family! The commercial producer of the year went to Fenco Farms of Floral City, Florida. The Pioneer Award went to Dr. Jon Beever, fitting as he is on faculty at the University of Tennessee. Dr. Beever has had a long history serving the beef industry through molecular genomics and reducing deleterious genetic mutations in beef cattle. Dr. Darrh Bullock also received the Pioneer Award this year. Dr. Bullock has had a large impact developing extension education programs and material to further genetic improvement for beef cattle. Tommy Clark, Joe Mushrush, Dr. Andra Nelson, Dr. Justin Rhinehart, and Dr. Todd Thrift were recognized with the Continuing Service Award this year. Scarlett Hagins Madinger with Kansas Livestock Association was honored with the Beef Ambassador Award.

IGS was well represented throughout the week at BIF. We had a bursting-at-the-seams IGS social, which is always such a great feeling to bond with the staff, breeders, and industry allies supporting the various organizations in the IGS collaboration. Two new BIF board members are from associations in the IGS evaluation. Bruce Holmquist with the Canadian Simmental Association and Lindsay Upperman with the Red Angus Association of America were elected to the BIF Board of Directors to serve as breed association representatives. Several of the presentations were tied to IGS as well. Lane Giess and Lindsay Upperman joined a panel discussion on the importance of whole-herd reporting for improvement of beef cattle genetics. Ryan Boldt presented on using commercial or non-traditional data sources like beef/dairy cross calves in a genetic evaluation, and Dr. Dan Garrick presented BOLT and Helical tools to advance beef cattle genetic technology. These talks were well attended and well received. If you missed seeing the talks live, I highly recommend watching the videos. Head to beefimprovement.org and click on the Symposium tab to find this year's presentations.

As always, I walked away overfed, sleep-deprived, with a mind full of new ideas, and a heart happy to have had the time to see old friends and meet new ones. I hope you can join me at the next BIF meeting in Amarillo, Texas, in 2025. ■

BIF Brief

by ASA Staff

The Beef Improvement Federation (BIF) held their annual symposium June 10–13 in Knoxville, Tennessee. Several beef industry professionals and breeders in the SimGenetics community were recognized.

BIF Seedstock Producer of the Year

Red Hill Farms

Red Hill Farms, Lafayette, Tennessee, was recognized as the BIF Seedstock Producer of the Year. This national award is presented annually to a producer to recognize their dedication to improving the beef industry at the seedstock level.

As a seventh-generation family operation, Red Hill Farms has focused on incorporating technology that allows them to produce quality livestock and provide the best selection tools to their customers. Their extensive data collection practices have enhanced genetic evaluations across multiple breeds, enabling them to meet the needs of their customers.

Red Hill Farms started as a successful swine seedstock operation, adding beef cattle in 2002, initially with Red Angus cows. They have since incorporated Simmental, Angus, and Charolais to develop a herd of 500 mature cows. Their commitment to maintaining extensive performance records has ensured the production of quality bulls and females for their annual sales.

Red Hill Farms' emphasis on data collection has allowed them to focus on improving economically relevant traits and utilizing economic selection indexes to expedite genetic progress in their herd. This focus on both genetic

and phenotypic traits has been crucial to their success and contributions to the beef industry. Their willingness to adopt new technologies has allowed them to continually improve and provide high quality genetics to their customers. Red Hill Farms was nominated by the Red Angus Association of America.

"Red Hill Farms is a shining example of a seedstock provider whose extensive data collection practices will enhance genetic evaluations across multiple breeds," says Katie Martin, director of communications for the Red Angus Association of America. "Their tremendous record-keeping, and organizational skills have been paramount to maintain the volume of data they've compiled over the years."

Dedicated to giving back to the agricultural community, Red Hill Farms hosts educational seminars to share their knowledge of animal breeding with their customers. Held prior to their spring and fall sales, these seminars aim to educate their customers on industry-leading technologies and best management practices. Their goal is not only to educate their customers, but also provide them superior genetics that will help increase profitability and enhance consumer appeal for US beef and pork.

(Continued on page 20)

Red Hill Farms receiving the 2024 BIF Seedstock Producer of the Year Award. Pictured left, presenting the award is Robert Williams representing Drovers, sponsor of the award, and far right Kevin Schultz, 2023–24 BIF president. Accepting the award are Susan, Gordon, Bart, and Sarah Jones.

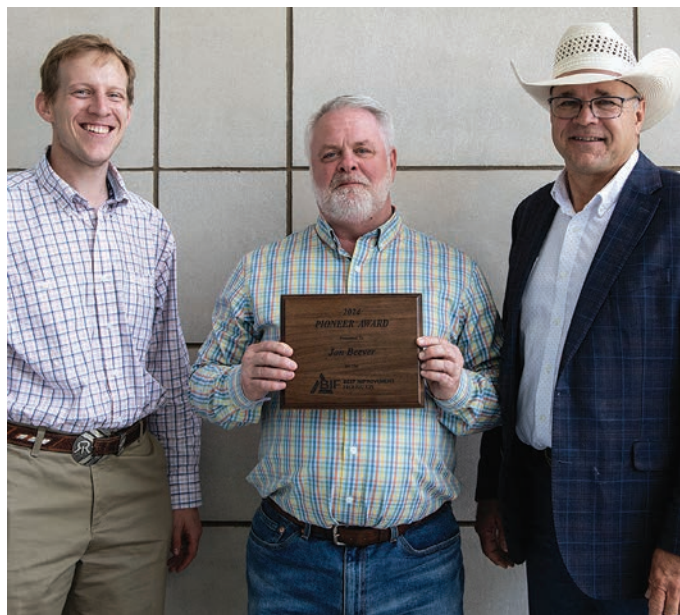

BIF Pioneer Award

The BIF Pioneer Award recognizes individuals who have made lasting contributions to the improvement of beef cattle, honoring those who have had a major role in acceptance of performance reporting and documentation as the primary means to make genetic change in beef cattle.

Jon Beever — BIF Pioneer Award

Beever has spent his nearly 30-year career pioneering the use of molecular genetic technologies in beef cattle and other livestock species. He spent 20 years on faculty at the University of Illinois before moving to the University of Tennessee in 2019 to help found its Genomics Center for the Advancement of Agriculture, where he is responsible for catalyzing and coordinating genomics research across the university while maintaining his own research. While at Illinois, Beever became a leading authority on mapping genetic abnormalities in livestock and developing diagnostic tests that have become essential tools for the beef industry. Most recently, his research has focused on applying genome editing to large-effect growth genes in cattle.

Throughout his career, Beever has been a mentor to numerous students and faculty as well as an invaluable collaborator to many in the beef industry. Beever's career has been focused on advancing livestock genetics and enhancing genomics research, while mentoring the next generation. He is a longtime collaborator with the American Simmental Association and International Genetic Solutions.

BIF Pioneer Award recipient Jon Beever, pictured with (L-R) Dr. Troy Rowan and Kevin Schultz, BIF past president.

Darrh Bullock — BIF Pioneer Award

Bullock is a pioneer in developing programs and educational concepts that have led to the betterment of beef breeding programs nationally. Serving as an Extension professor at the University of Kentucky since 1992, he has made an impact on both students and faculty involved in beef cattle breeding and genetics. Beyond his role as a professor, Bullock has brought transformational in-state programming to the state of Kentucky. He developed a genetic session for the Master Cattleman program and was a founding member of Kentucky's integrated resource management committee.

Bullock has a long-standing record of service to BIF, having served as the Eastern Region Secretary, chair of the multi-trait selection committee, and chair of the guidelines committee. Bullock's career has been focused on educating those around him and advancing the beef industry. He has worked with the American Simmental Association and International Genetic Solutions on many research projects.

BIF Pioneer Award recipient Darrh Bullock, pictured with (L-R) Gordon Jones, president, and Kevin Schultz, BIF past president.

SimGenetics producer Roth Farm and Ranch of Sterling, Kansas, was nominated for the BIF Commercial Producer of the Year Award. To read more about them, please scan the QR code below, or find the July/August 2022 edition of the Register.

The newly elected BIF Board of Directors includes a number of ASA and IGS staff, breeders, and other industry partners.

Seated, L–R: Gordon Jones, Lafayette, Tennessee, president; Gordon Hodges, Hamptonville, North Carolina, vice president; Kevin Schultz, Haviland, Kansas, past president; Bob Weaver, Kansas State University, BIF executive director; Matt Spangler, University of Nebraska–Lincoln, USDA Extension Service representative; Megan Rolf, Kansas State University, BIF central region secretary; Troy Rowan, University of Tennessee, BIF eastern region secretary; and Michaela Clowser, National Cattlemen’s Beef Association.

Back row, L–R: Joe Epperly, Wamego, Kansas; Lindsay Upperman, Red Angus Association of America; Johnny Rogers, Roxboro, North Carolina; Ken Odde, Pollock, South Dakota; Bruce Holmquist, Canadian Simmental Association; Shane Bedwell, American Hereford Association; Casey Worrell, Harper, Texas; Craig Hays, Pierce, Colorado; Warren Snelling, USDA Ag Research Service representative; Robert Williams, Kansas City, Missouri, historian; John Irvine, Manhattan, Kansas; Matt Woolfolk, American Shorthorn Association; and Kelli Retallick-Riley, American Angus Association.

Not pictured: Mark Enns, Colorado State University, BIF western region secretary; Lorna Marshall, NAAB representative; and Jackie Atkins, American Simmental Association. ■

A Lifetime of Servant Leadership

by Burt Rutherford

Dr. Ashby Green says he can't hold a job. For the beef business, that's been a good thing.

Dr. Ashby Green looks back on his life and career and declares that he can't hold a job. A conversation with the veterinarian might, on the surface at least, indicate that he's right. But a deeper look into his life and times reveals a man with a strong servant ethic who, quietly and behind the scenes, did his part to make the cattle business better.

That servant ethic makes him quick to say there are many more people who had many more accomplishments than he and are deserving of more recognition. Anything he might have accomplished came about because "we did it, not just me."

But a long stroll down a lifetime path filled with many memories shows that Dr. Green, like many others, lived through and was part of perhaps the most remarkable and progressive times in animal health and the beef business. "I was there when it happened. I didn't do it. I didn't cause it. I was just lucky enough to be there," he says.

Dr. Ashby Green represents ASA's SimSpecialists team in and around Florida.

In fact, to truly chronicle Green's lifetime of accomplishments would fill most of the pages of this magazine and quite a few more. It's a lifetime of quiet servant leadership in the beef business.

Dr. Green was born in Guntown, Mississippi, a small town a few miles north of Tupelo. After playing football at Itawamba Junior College, it was on to Mississippi State University, then to Auburn for his veterinary degree.

"I grew up in a rural area that had limited veterinary coverage," he says. "Everybody was scratching out whatever kind of living they could with cattle, timber, crops." So he and his wife, Eleanor, one of four female classmates at Auburn, returned to Guntown and set up shop as country vets.

Then came an explosion of new veterinary colleges, Mississippi State included. They moved to Starkville and became two of the first seven faculty members at the newly minted institution. "I was Extension veterinarian and a clinician," he says. Green recalls that at the time, they laughingly told friends that he was the best Extension veterinarian that Mississippi State ever had. At the time, he was, because he was the first.

"Probably the most formative thing that occurred in that period of time, my first National Cattlemen's meeting was in New Orleans in 1977. I had a little commercial cow herd and was an Extension veterinarian. I came down to that meeting for the educational opportunities and got involved with what later became NCA and then NCBA."

He was chosen in 1981 to be part of the YCC, the Young Cattlemen's Council tour that NCBA continues to this day. For a young veterinarian from rural Mississippi, it was a profound and eye-opening experience.

"It was just one of the greatest things that ever happened to me," he says. "It's a life-changing experience because you meet friends of like mind in the cattle industry from all over the country." Indeed, running cattle in Mississippi is much different than running cattle in Montana, and having an opportunity to discover that expanded his world, perhaps for the first time, from Guntown, population 300.

"And I've stayed with NCBA ever since, always in the background," he says. If it's true that every preacher needs a congregation, Green's ethic of servant leadership

began to blossom. “I like to be the guy supporting the folks who wanted to be at the helm of the ship. And I’ve been so fortunate to meet some of the real leaders in the cattle industry in this country.”

He trailed north to Missouri where he took a job with Monsanto, where he was involved with recombinant bovine somatotropin or BST. It was there he encountered the emotionalism that has pervaded the food world. He shakes his head at those who want the beef business to reduce its environmental footprint yet refuse to allow it to use technology to do so.

From there, he had stints as a veterinary consultant, rancher, at the Florida State Veterinarian’s office, and as vice president of producer education with NCBA, among other experiences. He’s now consulting with Neogen, first to build Neogen’s genomic team when Neogen bought that business from Merial, and now with Neogen’s food safety efforts; with the American Simmental Association and International Genetic Solutions as Southeastern SimSpecialist; and others.

Food safety and genomics were two subjects he didn’t learn in vet school. “I don’t think genomics was even a term back then,” he laughs. “And I thought, ‘This will be great. It will be invigorating to learn something new.’”

Intellectual stimulation. Lifelong learning. If those are the secrets to a long and fruitful career, Green struck gold. “It is a true blessing to stay intellectually involved and try to give back to an agricultural industry that has given so much to me,” he says. “I try to figure a profound way to say it, but I was just lucky enough to be there when a lot of good things happened.”

Although he’s enjoying his grandchildren and preparing for retirement, he’s not done yet. “I’m pretty confident there still are some things to contribute as God blesses us with the opportunity to care for his cattle on a thousand hills,” Green says. “And I hope one of these days somebody will look up and say, ‘Well done, good and faithful servant.’”

Our treasured beef industry is thankful for, and dependent upon, individuals like Dr. Ashby Green, whose unselfish contributions over the decades have helped shape it into the respected powerhouse it is today. ■

Editor’s note: Dr. Ashby Green is a valued member of ASA’s SimSpecialists team, representing Florida and the surrounding area. This article originally appeared in Working Ranch Magazine.

Hydrops Update: TraitTrac and a Recommended Marketing Statement

ASA has been investigating a developing genetic condition that causes Hydrops pregnancies in a certain line of Simmental genetics. Here are some updates in relation to this research and ASA’s actions/suggestions:

Hydrops has been added to Herdbook’s TraitTrac with WS All Aboard B80 listed as a documented carrier. At this time there are no genetic holds placed on his descendants as there is not a DNA test available yet. Once there is a test, then Hydrops will follow the same policy as other genetic conditions.

Female progeny who are descendants of or are directly sired by WS All Aboard B80 (ASA# 2852207) are at risk for carrying a genetic abnormality called Hydrops. Daughters may develop a serious condition during late gestation that results in excess fluid in the fetal membrane, which typically causes the loss of the calf and occasionally the dam. There is no current test at this time to identify animals carrying this mutation. Research is ongoing regarding the transmission of the abnormality, and to develop a genetic test. Helping our producers navigate this issue is of the utmost importance to us. Therefore, given that there is neither a full understanding of this condition nor a test, careful consideration should be given regarding the question of whether to breed WS All Aboard B80 descendant females until more information is available to breeders.

For questions regarding established WS All Aboard B80 genetics, Hydrops symptoms, reporting an active case, or additional information, please visit the Hydrops Information Center at www.simmental.org or reach out to Jackie Atkins at jatkins@simmgene.com.

DNA Updates

DNA Research Fee Application

DNA research fees are \$1/minute and may apply to parentage rechecks, misidentified samples, or other scenarios involving unusual increase in staff time. Each case is unique, so estimating the final charge is difficult. If there are a significant number of animals not qualifying to a parent(s), please reach out to the DNA Department to discuss a rough estimate of time and cost.

Testing Timeline

Allow 4–5 weeks. Please communicate any deadlines you may be working with to the ASA DNA staff. Expedited and tracked shipping is always recommended when ordering kits and shipping samples to Neogen.

\$30 DNA Research Fee

Sample packages sent to the ASA office (with or without paperwork), instead of the lab, will incur a \$30 research fee. With the exception of research projects (CHR, CCG, CXP), all samples are to be sent directly to the lab with ASA paperwork.

TSU/Applicator Price Increase

Due to rising costs from the TSU manufacturer AllFlex™, ASA has increased the price of TSU sampling kits to \$22 per box. Each box will still include ten individual tissue sampling units. The cost of TSU applicators has also been increased to \$90 each.

Semen Sample Fee

There is a \$7.20 processing fee for all semen straws and/or semen samples submitted to Neogen for DNA testing.

(Continued on page 26)

Merit Award Recipients 2024

Seventeen outstanding AJSA members are recipients of the prestigious Gold and Silver Merit Awards, presented by the American Simmental Association (ASA). The American Simmental-Simbrah Foundation (ASF) established Merit Awards in 1981 to recognize AJSA members who have made significant contributions to their home, school, community, and the Simmental or Simbrah breeds. The winners were announced at the 2024 National Classic in Tulsa, Oklahoma. The ASF offers three award levels: Bronze, Silver, and Gold. The Gold Merit Award recipients will each receive a \$5,000 scholarship, and the Silver Merit Award recipients will receive \$2,500 to support their post-secondary education.

Gold

Hannah Buse, Ellisville, Mississippi, daughter of Clayton and Helen Buse, has been a member of the Mississippi Junior Simmental Association and AJSA for eight years. She recently graduated with honors from Lake Land College with an associate's degree in arts, and was a member of the livestock judging team. She will attend Iowa State University in the fall of 2024, studying animal science with the goal of attending veterinary school. She plans to work as a veterinarian and continue raising SimGenetics cattle. Buse has been an ambassador for her state association, queen, and herdsman of the year. She attended a number of regional and national events, and had many successes in livestock judging, public speaking, sales talk, and more. Since 2020, Buse has hosted the Deep South Open Beef Show.

Gold

Walker Housley, Dayton, Tennessee, son of James and Stephanie Housley, has been a member of the Tennessee Junior Simmental Association and AJSA for nine years. He is deeply connected to the Simmental breed through his family's operation, where he is a herdsman and the show barn manager. He is currently a sophomore at Lake Land College. He plans to attend a four-year university to study agricultural business, as well as the Western College of Auctioneers. Housley has worked as an auctioneer at a number of local events, and plans to pursue a career in the field. He has represented the eastern region on the AJSA Board of Trustees, and also held a number of leadership positions through his state association. He has had many successes in the show ring, and in educational competitions at Regional and National Classics.

Gold

Matthew Koverman, Minford, Ohio, son of Mike and Amanda Koverman, has been a member of the AJSA for 11 years, and the Ohio Junior Simmental Association for nine. He is currently a senior at Ohio State University, where he is studying agriscience education. He plans to pursue a career in teaching, and eventually obtain a PhD. His ultimate goal is to be an educator and advocate for the Simmental breed. Koverman has been the vice president of his state association, been on the Regional Classic planning committee, and has represented the eastern region on the AJSA Board of Trustees. He has participated in a number of service projects in his community, and through the AJSA. He has had a number of successes in the show ring, and in educational competitions. Koverman has also attended a Summit Leadership Conference.

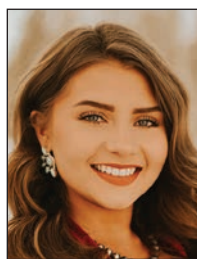

Gold

Drew Pederson, Sherman, South Dakota, son of Jana and Kip Julson, and Mark and Jen Pederson, is a sophomore at Fort Scott Community College, where he is a member of the livestock judging team. After graduating in the fall of 2025, Pederson plans to attend South Dakota State University, with the goal of becoming a veterinarian and practicing in his home state. Pederson has been a member of the South Dakota Junior Simmental Association for ten years, and the AJSA for eight. He served his state association as social media coordinator and treasurer. Pederson attended seven National Classic events, where he has had a number of successes, both in the show ring and educational competitions. Pederson has also been extremely involved in other junior livestock programs, including 4-H and FFA, holding a number of leadership positions.

Gold

Emerson Tarr, Le Roy, Illinois, daughter of Jennifer Tarr, has been a member of both the Illinois Junior Simmental Association and AJSA for 13 years. She served as president, vice president, secretary, and social media director of her state association. She also represented the north central region on the AJSA Board of Trustees. Tarr is studying agricultural communications at Kansas State University, where she is also a member of the livestock judging team. She plans to continue her education through a master's program, and work in agriculture while remaining involved with SimGenetics cattle. Tarr has had many successes in and out of the show ring at AJSA National and Regional Classics, from the bred and owned class to public speaking. She has also participated in other youth programs, holding a number of leadership positions.

Silver

Aribella Beins, Deweyville, Utah, daughter of Chris and Allison Beins, has been a member of the Utah Simmental Association and AJSA for 11 years. Beins will transfer to Utah State University this fall to study agricultural communications. She plans to work in animal pharmaceuticals. She looks forward to helping her younger family members as they start showing through the AJSA, and continue raising SimGenetics cattle. Beins participated in state shows, and attended her first AJSA Classic before she was old enough to participate. She has placed high in the overall competition, as well as the bred and owned class at AJSA Regionals and Nationals.

Silver

Chase Harker, Hope, Indiana, son of Dan and Jill Harker, has been a member of Indiana Junior Simmental Association for eight years, and the AJSA for ten. He has held leadership positions in his state association, on the planning committee for an Eastern Regional Classic, and has also represented the eastern region as an AJSA trustee. Harker is getting ready to attend college, where he plans to judge livestock. His larger goals include law school, and holding a political office. He wants to share his passion for agriculture, and educate the public about where food comes from. He has been successful in the shows and educational competitions at Classics.

Silver

Allison Coats, Richmond, Missouri, daughter of Susan Coats, has been a member of the Missouri Junior Simmental Association and AJSA for five years. She will attend the University of Missouri-Columbia in the fall, with plans to study agribusiness management and animal science. She plans to pursue a career in animal pharmaceuticals. Coats has her own group of cows, and also helps on her family's operation. She has participated in a long list of regional and national livestock events, with successes in the ring and educational competitions. Coats has been very involved in 4-H and FFA, and participated in many community service projects.

Silver

Bryce Hatfield, Pomona, Kansas, son of Scott and Melissa Hatfield, has been a member of the Kansas Junior Simmental Association for eight years and AJSA for six. He held several leadership positions for his state association, and helped organize several events. Hatfield participated in many Regional and National Classics. He has been extensively involved in events through 4-H, FFA, and other youth programs. He plans to attend Northern Oklahoma College and continue his education at Oklahoma State University, pursuing degrees in veterinary science. Long-term, Hatfield plans to practice in his community, focusing on large animals.

Silver

Claire Dorsey, Moro, Illinois, daughter of Brad and Beth Dorsey, has been a member of the Illinois Junior Simmental Association for 12 years, and the AJSA for 11. She has held many leadership roles through her state association. Dorsey is currently attending Lake Land College, and plans to transfer to Oklahoma State University to study agricultural communications and animal science. She also plans to return home to run the family cattle business. She has participated in many Regional and National Classics, placing well in the show ring and educational competitions. Dorsey is a past recipient of the Jim Bloomberg Scholarship.

Silver

Dillon Mai, Bonners Ferry, Idaho, son of Ryan and Maureen Mai, has been a member of the Idaho Junior Simmental Association for seven years, the Washington Junior Simmental Association for five, and the AJSA for 15. Mai grew up on his family's ranch, and has always been interested in the beef industry. He has helped organize Regional Classics, and has competed in many Classics. He is currently a sophomore at Kansas State University, studying agricultural economics. Mai plans to start a business in agriculture, and also return to Idaho to help manage the family seedstock business. He has participated in 4-H, FFA, and many service projects.

Silver

Kenidey Effling, Highmore, South Dakota, daughter of Chris and Kristi Effling, has been a member of the South Dakota Junior Simmental Association and AJSA for nine years. She served on her state board for two years. She plans to attend South Dakota State University in the fall, majoring in animal science and exercise science. Effling would like to return to her community to work in healthcare, and continue working on her family's beef cattle operation. Effling has participated in many Regional and National Classics, with success in educational competitions and the show ring. She has also participated in 4-H, and community service projects.

Silver

Riley Martin, Taylorsville, Kentucky, daughter of Josh and Emily Martin, has been a member of the Kentucky Junior Simmental Association and AJSA for ten years. She has held several leadership and organizational positions with her state association. Martin is a sophomore at South Dakota State University, studying animal and agricultural science. She works at Hilltop Simmentals, which she plans to continue as she finishes her education. Martin hopes to continue working in production agriculture following graduation, and open a bakery that also sells farm-fresh products. She has participated in several AJSA Classics, as well as 4-H and FFA.

Silver

Cole Glick, La Prairie, Illinois, son of Christy Glick, has been a member of the Illinois Junior Simmental Association and AJSA for 11 years. He has held several leadership and organizational roles with his state association. He recently graduated from Black Hawk College East, and is currently attending Iowa State University, studying agricultural business. He has participated in several Regional and National Classics, placing high in the cattle shows and educational contests, and has also participated in a long list of events and programs through other youth organizations. Glick has also been a part of many community service projects.

Silver

Cecillia Newby, Oswego, Kansas, daughter of David and DeRhonda Newby, has been a member of the Kansas Junior Simmental Association and AJSA for eight years. She has held several leadership positions, including as vice president of her state association. Newby attends Kansas State University, studying animal science and industry. She plans to attend law school with the goal of becoming an agricultural attorney. Newby has placed high in many educational competitions at AJSA Classics. She has also participated in 4-H and FFA programs, as well as community service projects. Newby also helps with her family's cow-calf herd.

Silver

Carter Hall, Ripley, West Virginia, son of Daron and Lisa Hall, has been a member of Ohio Junior Simmental Association and AJSA for 11 years. He has participated in many National and Regional Classics, succeeding in the show ring and educational competitions. Hall has also participated in other junior organizations, exhibiting cattle and participating in contests. He is currently attending Ohio State University, studying livestock production management with an emphasis in beef cattle and nutrition. His larger goals are to continue learning about genetics, and working to improve the beef cattle industry.

Silver

Conley Schick, Clinton, Illinois, daughter of Chris and Lacey Schick, has been a member of the Illinois Junior Simmental Association and AJSA for nine years. After high school, she plans to balance online college classes with working at her family's grain farm and trucking company. Schick plans to attend a junior college and compete on a livestock judging team before transferring to a four-year college to study agriculture. She has held several leadership positions for her state association, including president, and has attended many regional and national events. Schick has been successful in the show ring, and a number of educational competitions.

New Fiscal Year Underway for State Association Programs

It's a new fiscal year at ASA. A new fiscal year means a blank slate for state associations and this is a good time to plan how to take advantage of ASA's state association programs. Remember that each state association is allocated \$4,000 on a 60-40 split for most qualifying advertising items. States can also claim check-off dollars on a quarterly basis. Check-off dollar amounts are based on total cattle registration numbers per state and are paid at \$0.25 per registration. September 30 marks the end of quarter 1. In order to claim those dollars, a state association officer must visit simmental.org and complete the "Promotional Check-off Dollars Request Form" found in the Membership/State Association section. Contact Callie Cooley at stateassoc@simmgene.com with any questions.

2024 Year-Letter is M

In accordance with the Beef Improvement Federation guidelines, the year-letter animal identification for 2024 is M, and will be followed by N in 2025, and P in 2026. The letter L was the year-letter designated during 2023. Per the BIF guidelines, the following letters are not used: I, O, Q, and V.

Digital Certificates Available

ASA now offers members the option to download official digital certificates for registered animals. ASA no longer scans and emails or faxes copies of printed certificates, and is encouraging shows, sales, and other events to utilize digital certificates. Digital certificates are the easiest, most reliable way to obtain an official record quickly. To download a digital certificate, search for your registered animal on Herdbook. If you are logged in and the animal is registered in good standing, there will be a button to download a digital certificate. Only the current owner of an animal can access the digital certificate. Please contact the registrations department at simmental@simmgene.com with questions.

DNA Research Programs Continue

The Calf Crop Genomic (CCG) testing project and Cow Herd DNA Roundup (CHR) continue to accept new submissions. The CCG offers a 50% off GGP-100K genomic test including parentage (\$25 compared to \$50 equivalent test) to participating breeders who test their entire calf crop group.

The CHR program also continues to accept new herds. The project tests females at \$25 per sample for a GGP-100K genomic test. Members must test 90% of their calving-age cows to qualify for the reduced price. When members submit mature cow body weights and

body condition scores or hip heights on 90% of their calving-age cows, they will receive a \$5 credit to their account for each reported cow. Cows must be 18 months of age or older when mature cow measurements are taken to qualify for the \$5 credit. The \$5 credit will only be applied once in an animal's life. For example, if a member received a credit for the phenotypes in 2018 for that cow, they cannot receive another credit for the same cow with a new weight and BCS in 2019.

Additional requirements apply for both programs. Please visit simmental.org, and email researchdna@simmgene.com for full program requirements and more information.

Our Pioneers – Wilf Davis

This article was originally printed in the March 2020 edition of *the Register*. Wilfred “Wilf” Alexander Davis was born August 18, 1933, and passed away June 21, 2024. We extend our deepest condolences to Wilf’s family and friends. If there was a category of “Founding Fathers of the Simmental breed in North America” Wilf Davis would unquestionably be included. Davis was a legend in our industry and will forever be remembered as such. Our heartfelt gratitude is offered.

Wilf Davis, a partner and manager of Bar 5 Simmentals in the 1970s, was a Canadian cattle producer. Bar 5, another “Pioneer” in our breed, was one of the earliest and biggest Simmental operations in Canada with their first Simmental imports arriving in 1970.

Davis certainly fits the profile of a “Pioneer” in the Simmental industry. He grew up in Whitewood, Saskatchewan, on a farm where purebred Herefords were raised. Today, many of our young folk don’t believe the often-told stories by our elders of the hardships they encountered traveling miles, usually on foot, in the most inclement weather, just to attend school and make fun of such “tales” as some are inclined to call them. Davis, however, actually drove a horse to a one-room school and had to board in town to attend high school. Fortunately, he was able to get a university education. After graduation, he was employed by the Manitoba Department of Agriculture starting in May 1959. For 11 years he worked as a beef cattle field man covering large areas and all phases of the beef industry.

During his time there, he became involved with the Manitoba Bull Test Station (still in operation today, over 50 years later). In those days, any suggestion that beef cattle should be selected for anything other than appearance “could certainly stir up some excitement.” At that time, it was very difficult to produce bulls that gained over three pounds per day on test. When a Charolais bull became the first bull to gain over four pounds per day on test, it helped create attention among cattle producers interested in performance.

In 1966, a number of Department of Agriculture employees went to Selkirk, Manitoba, to see a group of imported Charolais bulls that were in quarantine. These bulls were so big and different from the domestic breeds that they had difficulty in appreciating what they were seeing. When he saw a picture of the Fullblood Simmental bull, Parisien, in the Western Producer being promoted by Travers Smith, (another of our “Pioneers”) he remembers he was “not impressed.” At that time he could not imagine the influence that bull, and the new breed to Canada, would have on the rest of his life. Later, while attending the Northern International Livestock Show in Billings, Montana, he traveled to a bull test station with Bob Gordon, one of the founding owners of Bar 5, where he saw his first Simmental/Hereford cross bull. Davis stated: “Until we were told what he was, we thought we had found the next great Hereford bull.”

Events of the times, such as Charolais sales, industry talk, and importation of Simmental and Limousin cattle by the Canadian Agriculture Research Stations, created interest in the possibility of importing cattle of other European breeds as well. The Bar 5 story began when Donn Mitchell, a progressive farmer and Hereford breeder actively involved in performance testing, and Bob Gordon, a well known Shorthorn breeder and two other cattle

operations, decided to get involved. In March, 1969, Davis was asked to accompany Donn to Switzerland and France to select the first Bar 5 imports. Over the years, at least eight more trips were made to Europe with Germany and Austria added to the mix. He recalls how different the farming practices were there as compared to what he was accustomed to seeing in Canada.

A precise protocol was developed by the Canadian Government with very strict regulations required to be met prior to any cattle being imported from Europe to Canada. Because Foot and Mouth Disease was prevalent in Europe, only non-vaccinated calves were eligible as prospects for importation. Usually, the calves being evaluated were pail-fed and about three months of age. Most of their sires were just a name in an AI stud with no performance records or even birth weights. Davis stated “It is fortunate the breed was better than the calves looked when they were selected.”

In July, 1970, Wilf and his family moved to Brandon, Manitoba, where he was manager of Bar 5 until 1978. There, he oversaw a rapid expansion of Bar 5 to two locations, lots of sales and shows in Canada and the US, coupled with two trips per year to Europe to continue the selection of Simmentals to add to the Bar 5 herd. In 1978, he formed Davis Livestock Service as a consulting company covering marketing and sales management, and selected cattle for various sales as well as block and order buying.

In January of 1981, Elson McDougall of 3MC Stock Farms purchased Bar 5. Elson asked Davis to once again become part of the Bar 5 management staff, which he accepted. A new front opened for Davis as he became involved with contacts in New Zealand and Australia, which led to considerable new business for Bar 5 and other Canadian operations. In addition, Davis was involved with on-farm consulting in Australia and New Zealand and with a Swiss breeder with operations in the US and Ireland. The final 20 years Bar 5 operated in Manitoba, Davis was involved in all aspects of the operation.

In addition to this very brief history of Davis’s career, he is well known worldwide as an astute and incredibly knowledgeable cattleman and renowned judge. So much so that in 1995 he judged the bulls for the Perth Bull Sale in Scotland. In 2009, he was awarded the A.O. Henuset Memorial Award from the Manitoba Simmental Association. In 2006, he was the recipient of the Golden Book Award. That same year, he was inducted into the Canadian Simmental Hall of Fame. Davis cherishes these honors and is quick to point out that a lot of people helped him in his career along a long and fortuitous path.

Time and space for this column limit me from expounding on Davis’s illustrious career and the many contributions he has made for the Simmental breed in North America. We, as Simmental breeders, are indebted to his humble and selfless efforts over so many years to bring Simmentals to the forefront of the North American beef cattle industry. A true “Pioneer” for sure. From all of us, thank you Wilf! ■

Editor’s note: This is the thirty-ninth in the series Our Pioneers.

Updates from the Colorado Simmental Association

The Colorado Simmental Association (CSA) will host a new Simmental bull show at the 2025 National Western (NWSS) pen show. This new CSA-sanctioned event, called Phenotype and Genotype (P&G), will be held after the standard Purebred and Percentage Simmental pen shows at the NWSS. The P&G will provide an educational opportunity to highlight the value of EPD and selection indexes as a part of the seedstock selection process. Animals entered in the P&G will be evaluated by a separate division judge and associate judge under a system that combines assessment of the bulls' genotypes (EPD and indexes) and phenotypes equally weighted at 50 percent. More information can be found at coloradosimmental.com.

The 2025 NWSS will also include the 20th annual People's Choice Power Simmental show. The NWSS will also be designated as ASA's National Show.

The judges and schedule will be:

Saturday 1/18 – In the yards:

- Progress Through Performance bull pen show will be judged by Jay Hennessey of North Dakota, and associate judge Johnny Johnson of Nebraska.
- New P&G pen show will be judged by Steve Eichacker of South Dakota, and associate judge Tim Curran of California.
- People's Choice

Sunday 1/19 – In the yards:

- PTP female pen shows will be judged by Jay Hennessey and associate judge Johnny Johnson.
- People's Choice
- ASA Meet-n-Greet and sale preview
- The One & Only sale with Power Simmental selection.

Monday 1/20 – On the Hill:

- Open class female and bull shows will be judged by Chris Mullinex of Kansas, and associate judge Daniel Dobbs of Georgia.

Tuesday 1/21 – On the Hill:

- Junior shows will be judged by Justin Adcock and associate judge Bob Adcock, both of Illinois.

In addition to the national Simmental show designation, exhibitors should note that the 2025 Hill shows will be the final year cattle breed shows will be held in the historic Stadium Arena, which debuted at the 1909 expo. New show rings and facilities, under final construction nearer the yards, will be used for the 2026 NWSS.

The National Western's Stadium Arena was built in 1908 and first used during the 1909 National Western Stock Show. It was originally called the National Amphitheatre. Simmental will use the ring on Jan. 20 & 21, 2025, in a final year in the Stadium Arena for the breed's "National show" in Denver. Photo courtesy of the NWSS archives.

Georgia Simmental Association Elects New Officers

The Georgia Simmental Association (GSA) held their annual meeting and election on August 10th. The GSA is ramping up efforts to involve SimGenetics breeders in the state, with plans to utilize ASA Cost-Share dollars and other membership programs. Georgia SimGenetics breeders are encouraged to visit georgiasimmental.com to find a membership form.

The GSA's newly elected officers. Sitting, L-R: Billy Moss, President; Grace McClain; Lisa McClure, Secretary/Treasurer; and Jeremy McClure. Standing, L-R: John Callaway, Vice President; Chandler Akins; Jesse Driggers; Howard Johnson; Lowell Kissinger; Gary Jenkins; and Bradley Gibbs. Not pictured: Ellie Gillespie. ■

A photograph of a herd of cattle being driven through a corral by four cowboys on horseback. The scene is set at sunset, with a warm, orange glow in the sky. The cattle are in the foreground, and the cowboys are further back, guiding them through a series of metal frames. The overall mood is one of traditional ranching and heritage.

TRUST THE ORIGINAL

The first multi-breed evaluation is still cattlemen's first choice.

by Carrie Horman, ASF Board member

The week of the AJSA National Classic brings a lot of anticipation of something new and what is going to take place, excitement for the old traditions to carry on, and everything in between. The American Simmental-Simbrah Foundation (ASF) had a lot of the same emotions going into the 2024 National Classic with hosting of the 8th Annual Breeders Cup Golf Tournament and 2nd Annual Simmental Sizzle Barbeque Contest. Both events are designed to raise funds for the youth of the Simmental breed for their Merit Scholarships and Leadership Workshop.

Four teams fired up grills and smokers on Wednesday, July 10 for the opportunity to showcase how they could prepare and present a tri-tip roast, shoulder tender, top blade steak, and a dish of their choice for the "I Can't Believe You Smoked That" category.

Four judges evaluated all categories based on presentation, taste, tenderness, and overall effectiveness of the beef cut, and the freestyle category whether it was a dessert, side dish, or whatever the team had prepared. A People's Choice vote also took place as teams prepared samples for the audiences to taste-test and vote on their choice of what was the best dish by placing cash in the team's jar.

A lot of conversations on recipes, how to prepare different cuts of meat, and "oh my that was incredible" chatter took place all day as the teams tended to their secret methods of preparing for turn-in time to the judges.

As the teams turned in their dishes, judges evaluated, and the determination of the winners came to a head, revealing the following winners of each category:

- Shoulder Tender: Matt, Brandi, and Myles Karisch
- Tri-tip Roast: James Maciejewski and Mike Henderson
- Top Blade Steak: James Maciejewski and Mike Henderson
- Open Category: James Maciejewski and Mike Henderson
- Overall Team: James Maciejewski and Mike Henderson
- People's Choice Award: Thomas and Rashele Lundy and Blake Runner

ASA Board of Trustees member Brandi Karisch and her husband, Matt, competing in the Barbecue cookoff.

On Thursday, July 11, the 8th Annual American Simmental-Simbrah Breeders Cup Golf Tournament kicked off at the Hard Rock Casino Golf Course. Twenty-three teams from all over the

country came together for a little friendly competition of golf strategy, birdies, some cow talk, some trash talk, and a whole lot of laughs had by everyone.

"We've never had the chance to golf at the Simmental tournament and we had so much fun," said Jamie Schaaake of Kansas.

The course was beautiful and challenging as teams had to pull more tricks out of their hats to make par. The Wonky Winners of Ty Drach, Seth Tucker, and Justin and JW Teets came out on top with a score of 52. We're all about hanging banners in this business. The Champion team can now hang their banners and hold bragging rights until 2025! Buck Creek Cattle with Jacob Moore, Justin Johnson, Garret Cloud, and Kent Jaecke were our Reserve Champion team by a close score of 54.

Individual contests were set up as the players shot their 18 holes for added fun and competition. The winner of the Longest Drive was awarded to Seth Tucker. Tyler Mackey took home the Longest Putt Champion banner. We had two Closest to the Pin competitions where Bill Skiles won Hole 7 and Craig McCallum won Hole 13.

The Wonky Winners team made good on their team name and took home the ASF Golf Tournament championship. Pictured here are Ty Drach, Seth Tucker, and Justin and JW Teets.

Craig McCallum, one of the "Closest to the Pin" winners.

Together, the BBQ Contest and Golf Tournament raised over \$13,000 to go back to Simmental youth. We could not have done that without the donations of all our sponsors of the events, and cannot say THANK YOU enough for your support and generosity.

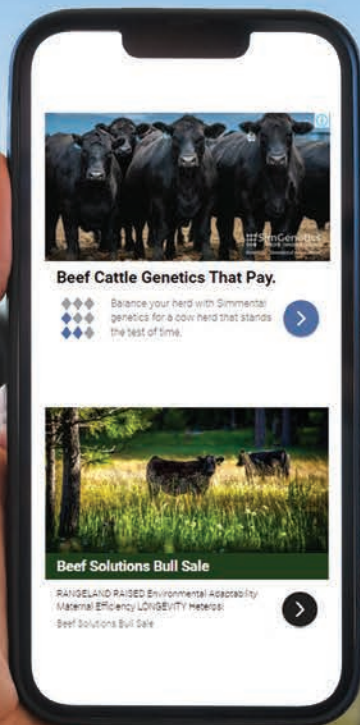

Make plans for the 2025 AJSA National Classic to be held in Grand Island, Nebraska. Plans are already in the making for the 3rd Annual BBQ Contest and 9th Annual ASF Breeders Cup Golf Tournament. ■

Retargeting the American Simmental Association Audience

Developing leaders through friendship, networking, and communication skills!

by Walker Housley, AJSA president

The American Junior Simmental Association, aka the real AJSA, and the place I call home, has meant more to me than I can put into words. I still remember attending my first

Some of whom have retired or aged out completely, and others still very much influential members within the Association. Regardless, my time on the AJSA Board has been more than I could have ever imagined.

That's why this summer, I was honored to be elected by my peers as the newest AJSA President. I am looking forward to an incredible year serving with a phenomenal board to make the future of the AJSA even brighter. I believe that leadership isn't a position of authority, but more over an action and an example. Leadership is the ability to get in the trenches, harmonize the strengths of those around you, and push everyone for the greater good of themselves, the Association, and the beef industry as a whole.

While the board and I have many goals for the upcoming year, one of my main aspirations for the AJSA is to continue to strive for the excellence of our youth. The AJSA is one of the only breed associations where kids do not have to have the champion heifer to have success. The AJSA believes in ambition and hard work to allow for youth to catapult themselves into successful positions by competing in numerous educational contests. While I am as big an advocate for competitive cattle shows as any, at the end of the day my goal is that we do not lose sight of the bigger picture. The future of the AJSA is luminous, and there is no better time to breed 'em all Simmental. So, jump on board, the best is yet to come. ■

ever AJSA Regional Classic in 2016, and since that miserably hot week in June, my life has never been the same. I made myself a promise then, that I would never miss another AJSA event. So, every summer we packed our trailer and headed to a new location across the United States to meet new friends, catch up with old ones, and build unmatched connections and skills.

As I got older, I looked for ways to give back to the Association that gave so much to me, and I couldn't think of a better way than to run for the AJSA Board of Trustees. So, in 2020, I ran and was elected as an Eastern Region trustee in Grand Island, Nebraska. This is when my life was really changed. Not only has the AJSA Board allowed me to give back to the Association, but it has helped me build priceless leadership experiences and make numerous industry connections that I would never have had otherwise. Most importantly, though, I have met some of my best friends on the AJSA Board.

Beef Markets Reflect Excess Fat and a Shortage of Lean

by Derrell S. Peel, Oklahoma State University Extension

Choice boxed beef price has decreased by 5.4% since July 4 to a current level of about \$312.50/cwt., 3.4% higher year-over-year, as of July. The decline in boxed beef price is seasonal during the hottest part of the summer. Boxed beef prices are a composite based on about 50 wholesale beef cuts and subprimals. There are some interesting things going on within this set of products this year that reflect the unusual environment in today's cattle and beef markets.

Middle meats are the biggest driver of total beef value. Beef tenderloin is the highest-value beef cut and the price has been quite flat and lower year-over-year for much of 2024. This weakness is a bit concerning, but the fall may provide an important indicator of tenderloin demand going into cooler weather, and the seasonal pick-up in restaurant traffic. In contrast, the other steak cuts have values that are generally at or above year-ago levels, including ribeye, strip loin, and top sirloin. Overall, rib primals are priced about 3.4% higher year-over-year and loin primals are averaging 1.4% lower this year. Middle meats from the rib and loin primals are the heart of boxed beef values.

A look at prices across the various end primals paints an interesting picture. The majority of chuck products are priced either about the same as last year or lower year-over-year. This includes the top blade, arm roast, petite tender, and chuck roll. One notable exception is the mock tender, which is currently priced well above year-ago levels. Overall, chuck primal values are up 6.6% year-over-year in July. In contrast, round cut values are mostly higher this year. Higher values are noted for knuckles, inside rounds, bottom round, outside round, and eye of round. Overall, round primal values are nearly 21% higher year-over-year.

These values across the carcass contribute to the overall boxed beef value of fed beef production. Fed beef is the result of steer and heifer slaughter. While overall beef production is down 1.6% year-over-year so far, the modest decrease in steer and heifer slaughter, combined with dramatically higher steer and heifer carcass weights, has led to a 0.9% year-over-year increase in fed beef production through the first half of the year. Increased days on feed contribute to the heavy carcass weights and also to an average of nearly 22% yield grade 4/5 cattle this year. An average of 87% of fed cattle are quality grading Choice and Prime thus far in 2024. Fed beef is about 84% of total beef production.

Nonfed beef typically makes up the remaining 16% of total beef production and consists of cow and bull slaughter. Nonfed beef production is down nearly 13% year-over-year thus far in 2024. Cow slaughter is down over 15% and bull slaughter is down nearly 8%. Nonfed beef production is the source of 90% lean trimmings, a major ingredient for ground beef. The current wholesale price of 90% lean trimmings is at a record level and is higher than several of the round cuts mentioned earlier. The market is attempting to make up for the shortage of lean beef in the nonfed market by pulling more lean beef from fed beef supplies. This mostly comes from several round cuts, but also likely from the chuck mock tender (one of the few lean cuts in the chuck). Markets always attempt to balance supply and demand, and the increased arbitrage between fed and nonfed beef markets today is an indication of a very unusual market situation.

New Study Addresses Fescue Toxicosis through Therapeutic 5-HTP

by Maggie Malson, Bovine Veterinarian

Fescue toxicosis costs the cattle industry more than a billion dollars each year. Cattle producers will be interested in a new study beginning at the University of Kentucky (UK) aimed at the potential of hydroxytryptophan (5-HTP) in mitigating fescue toxicosis in beef cattle.

UK Martin-Gatton College of Agriculture, Food and Environment (CAFE) received a \$300,000 grant for the research project aimed at the issue affecting beef production, especially in regions dominated by endophyte-infected tall fescue, according to a news release.

Department of Animal and Food Sciences assistant professor Ronald Trotta says fescue toxicosis reduces the weaning weight of nine million US beef calves per year by an average of 50 pounds each.

Fescue toxicosis can cause reduced feed intake, increased vasoconstriction and susceptibility to heat stress, along with compromised gut integrity. This research is especially relevant to Kentucky, where 14 million hectares are covered with this type of fescue affected by ergot alkaloids.

"We will be focusing on the three primary fescue toxicosis symptoms," Trotta explains. "The ergot alkaloids in fescue bind to specific receptors in blood vessels, causing vasoconstriction. This reduces blood flow to critical areas like the gut, decreasing nutrient absorption and activating the immune system."

According to the release, the two-year study will evaluate the effectiveness of 5-HTP, a precursor to serotonin, in alleviating these symptoms. Increased serotonin bioavailability is expected to relax blood vessels, improve dry matter intake, and reduce immune system activation, thereby counteracting the adverse effects of ergot alkaloids.

Using a multi-faceted approach, integrating nutritional, hormonal, and transcriptomic analyses, researchers will examine gene expression in various body parts to understand how 5-HTP influences feed intake, vasoconstriction, and gut health.

"We are conducting this study under very controlled conditions, using six animals per treatment group," Trotta says. "This smaller scale allows for precise monitoring and comprehensive data collection."

Trotta recently joined Martin-Gatton CAFE and shared his enthusiasm about this research's potential impact.

"This project could offer a novel and effective strategy to mitigate the clinical symptoms of fescue toxicosis, significantly benefiting beef producers in Kentucky and beyond," he says.

The research outcomes are expected to provide new insights into the molecular mechanisms of fescue toxicosis and the therapeutic potential of 5-HTP, contributing to improved animal health and agricultural productivity, according to the release.

New Diagnostic Program Developed for Feedlot Employees

A new cattle health initiative has been developed by Production Animal Consultation (PAC). The Certified Sampler program was developed to train feedlot personnel to obtain ante-mortem

(Continued on page 36)

(Continued from page 35)

and post-mortem samples from cattle for surveillance and diagnosis of pathogens that impact the health, performance, and profitability of cattle. The program is a day-long training session conducted at the participating feedlot where personnel enjoy classroom sessions augmented with bilingual video examples followed by hands-on sessions in the processing barn and at necropsy with PAC veterinarians and trainers. The morning session focuses on taking ante-mortem samples such as nasal swabs, blood samples, ear notches, and more for disease surveillance, while the afternoon session focuses on necropsy techniques, gross pathology common to feedlot cattle, and tissue sampling. The training concludes with proper sample preparation and how to get samples safely to the diagnostic laboratory.

"Implementation of this program gives timely and precise health assessments which will advance our disease management strategies and elevate our animal health in the short term," says Dr. Taw Fredrickson. "In the long term, the PAC group is able to provide the most current recommendations and advancements, which reflects our commitment to industry-leading practices and sustainable livestock management."

"This program will help our team be able to detect early disease, so we are better prepared to help our customers achieve better cattle performance," said Francisco Rodriguez, manager at High Choice Feeders Yard 2 and program participant. "By detecting disease sooner, we ensure healthier cattle and sustainable practices within our facilities."

The program mimics a similar program in the swine industry. The Certified Swine Sample Collector project was initiated by Iowa State University to train people on-site to sample in the case of a foreign animal disease (FAD) outbreak. The goal is to have people already at the site prepared to take samples efficiently, improving response time to such a natural disaster while not requiring outside people to become contaminated on-site. While PAC's Certified Sampler program for beef could be used for timely Secure Beef FAD sampling platforms, the focus today is surveilling and diagnosing common diseases that impact feedlot cattle health, food safety, and food security every day.

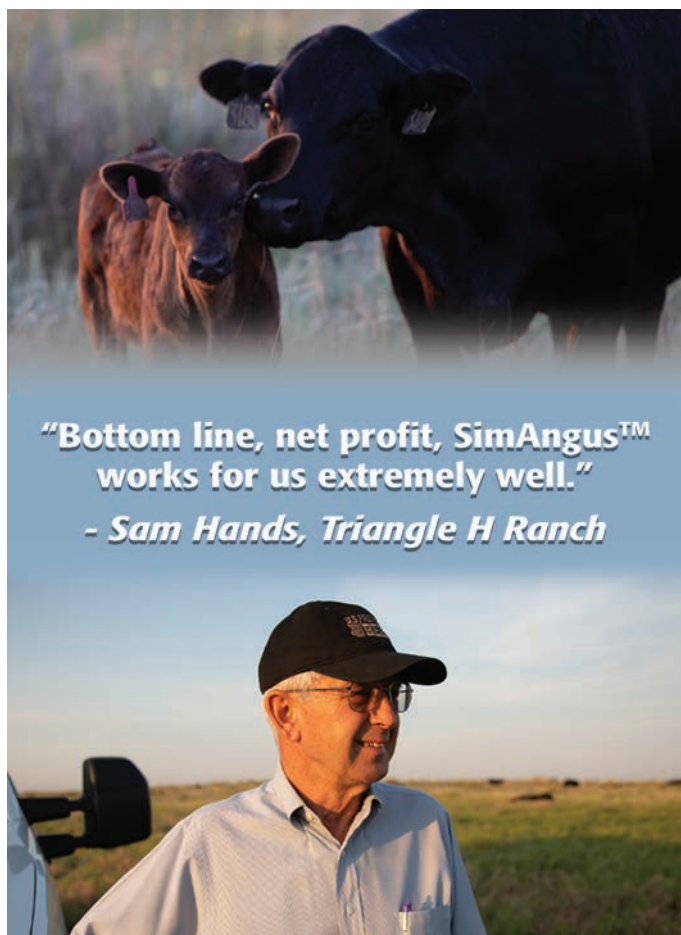

Certified Sampler will be a collaborative project with the veterinary diagnostic laboratories at the University of Nebraska-Lincoln and Iowa State University. University of Nebraska-Lincoln Veterinary Diagnostic Center director, Dr. Dustin Loy, indicated, "One of the largest challenges in cattle diagnostics is the timely collection of proper samples to be submitted to a laboratory for testing. Having highly trained personnel that are already heavily engaged with animal health be able to collect and submit those samples immediately allows for more prompt treatment and informed implementation of mitigation measures. Early identification and rapid response to diseases are key to ensuring healthy cattle."

PAC has an elite feedlot database that has tracked animal health and performance for over two decades. As surveillance and diagnostic samples are submitted, PAC will be able to study potential correlations between the pathogens present and individual cattle and lot-level data. Why is this important? The feedlot industry has tracked cattle health and performance, and feedlot veterinarians have sporadically diagnosed pathogens in feedlot cattle health outbreaks. However, it is time to combine surveillance and diagnoses with cattle health and performance outcomes. This will allow veterinarians and feedlot operators to better understand disease impacts, which will lead to potential disease management interventions in the future.

One such intervention in the future could be the use of prescription vaccines. Therefore, a natural partner for this PAC initiative was Medgene, a vaccine company located in Brookings, SD. Medgene's technology allows them to take bioinformatics from currently isolated viruses and develop a prescription vaccine to match strains of pathogens encountered in the field today.

Medgene's Executive Vice President, Dr. Gary Bosch, stated, "We are pleased with our partnership with PAC and excited to support their industry-leading Certified Sampler program. Bioinformatics represent the engine in our prescription platform vaccine technology. Certified Sampler represents the fuel to ensure that the vaccines we provide to the veterinary community are timely and relevant, as opposed to vaccines based on viruses that occurred years ago that have long since mutated beyond effective treatments."

While this is a long-term partnership between PAC, veterinary diagnosticians, feedlot operators and Medgene, the immediate results are promising. Samples are rolling into regional diagnostic laboratories from certified samplers in feedlots across Nebraska, Kansas, Colorado, and Iowa. Much will be learned over the next five years toward understanding the impact of pathogens and better field diagnosis on cattle performance, health, and profitability in our operations. ■

Industry Aims to Reduce Meat Trade Obstacles to Canada

Several meat industry trade groups are collaborating to boost the red meat export market to Canada.

A key part of that effort, explains the US Meat Export Federation (USMEF), is the regulatory system between the United States and Canada. Although the recently adopted Public Health Information System (PHIS) Export Module reduced paperwork and simplified the export process, documentation obstacles persist. Thus, USMEF and the North American Meat Institute are developing recommendations to further simplify the regulator process and bolster US meat exports to Canada.

"Canada is one of our largest trading partners for both beef and pork," says Courtney Heller, USMEF's director of export services. "PHIS was intended to reduce paperwork and human error. [...] We're finding that our electronic system is requiring paperwork, and that was not the intention. So we're working with Canada to streamline the documentation process."

Heller noted that some USMEF members have stopped their shipments to Canada because of border stoppages, and meat associations are working to "address some of the slowdowns at the border that could be improved upon by reducing some of the inspection requirements or testing requirements."

In 2023, the US exported nearly 220,000 metric tons of pork, valued at \$875 million, to Canada, making it the fourth-largest destination for the protein. Canada was also the fifth-largest market for US beef, with exports of 103,500 metric tons valued at \$875 million. "Our countries have virtually equivalent food safety systems, so some of our inspection processes could really be eased by just working together," Heller said.

Philippine Officials Prepare for ASF Vaccinations this Fall

New vaccines to protect pigs from African Swine Fever (ASF) are expected to launch in September in the Philippines, the nation's Department of Agriculture recently announced.

"We will bid this out this August and hopefully by September we can implement it," Agriculture Secretary Francisco Tiu Laurel Jr. announced in Pasay City after a State of the Nation Address. The deadly viral disease was first detected in the island nation in July 2019 and has since spread to 73 of the country's 82 provinces as of June 2024, according to the latest data from the Food and Agriculture Organization of the United Nations (FAO). Current plans call for the vaccines to be tested for six months in a mass trial, which officials believe will open the door for commercial use, Tiu Laurel said.

ASF has decimated the hog population in the Philippines, with pork supplied by local hog farmers as of April 2024 falling to about 753 metric tons versus 3,114 metric tons in the first four months of 2023, according to a report from GMA News Online. The disease is 100% fatal among swine as affected animals are culled even if they recover from the virus. Government officials also expressed confidence in the vaccination program after confirming the efficacy of vaccines in use in Vietnam, according to Tiu Laurel via ABS CBN News.

Canadian Court Temporarily Halts Kosher Slaughter Rules

A federal court in Ottawa issued a decision to halt enforcement of guidelines regarding ritual slaughter of animals originally issued by the Canadian Food Inspection Agency (CFIA) in 2021.

The ruling notes that there are serious issues about whether the guidelines covering the slaughter of animals that provide meat cuts that can be considered kosher are unreasonable, as a group of Canadian agencies that certify kosher meat contends. The agencies filed a lawsuit earlier this month seeking an injunction to block the CFIA rules, which the agency did not enforce at slaughterhouses until June 2023. The CFIA guidelines require slaughterhouses to determine whether an animal is unconscious and no longer can feel pain as outlined with rules in place to maintain kosher standards.

The court challenge contended that the CFIA guidelines are reducing production of kosher meat across Canada. Meanwhile, the court also ruled that the government cannot legally enforce a standard that involves establishing three indicators that animals are unconscious before slaughter as required under kosher certification rules. The court decision notes that the CFIA guidelines could be considered unreasonable and possibly violate rights to equality and religious freedom in Canada. ■

COW SENSE

Register

Ten questions designed to test your beef industry knowledge:

1. Who is the current CEO of the ASA?
2. What is the unit of life, which contains cytoplasm, a nucleus, and a membrane?
3. What blood component is also known as an erythrocyte?
4. What is the primary function of endocrine glands?
5. Which single item comprises the largest portion of total by-product value from a processed beef animal?
6. Which discipline concentrates on the study of early prenatal development of an animal?
7. A group of animals related by descent from common ancestors and visibly similar in most characteristics is known by what collective term?
8. When does a fetus become an animal?
9. The olfactory nerve controls which sense?
10. What is the term for the gelatinous material found in the interior of the eye? ■

Answers:

1. Dr. Wade Shafer; 2. A cell; 3. A red blood cell; 4. Hormone production; 5. The hide; 6. Embryology; 7. A breed; 8. At birth; 9. Smell; 10. Vitreous humor.

Proper Hay Storage

by Mark Z. Johnson, Oklahoma State University Extension

Proper hay storage of big round bales is important in order to minimize spoilage until time of feeding. It is worth discussing some simple storage practices that can lead to less spoilage. First, one of the few upsides of drought is that very little precipitation falls on hay stored outside. Precipitation, air temperature, and humidity all lead to more spoilage in big bales. Twine-wrapped bales are more subject to spoilage than net-wrapped. Greater bale density leads to less spoilage. That being said, keep the following in mind when considering how your hay is stored.

Storage Site and Elevated Storage

Select a site on higher ground that is not shaded and is open to air flow to enhance drying conditions. The site should be well drained to minimize moisture absorption into the bottom of bales. Ground contact leads to more bale spoilage. When practical, keep bales off the ground using low-cost surplus materials like old pallets, fence posts, railroad ties, and tires. Another option is a six-inch layer of coarse ground rock. Anything that can be done to maximize drainage and minimize moisture within and around the storage site will be beneficial.

Orientation

Bales should be stored in rows, butted end-to-end, and oriented in a north/south direction. Avoid stacking three rows of hay in a triangle shape. This formation leads to more spoilage, particularly in the two bottom rows. North/south orientation combined with at least three feet between the rows permits good sunlight penetration and airflow, allowing for faster drying. Vegetation between the rows should be mowed.

Covers and Barns

Large round bales stored outside with plastic or canvas usually sustain much less spoilage compared to unprotected bales. If barn storage is an option, this is the best method. Dry matter losses in round bales stored for up to nine months in an enclosed barn should be less than two percent.

Summary

All forages packaged in large round bales benefit from protection and proper storage practices. Producers are encouraged to consider the cost to benefit ratio of providing this protection. Factors to consider include the value of hay, projected in-storage losses, local environmental conditions, the cost of providing protection, and how long the hay will be in storage before it is fed. At the very least it may be worthwhile to restack or re-orient your hay supply according to the best practices described.

Take Steps Now to Make a Biosecurity Action Plan

Boehringer Ingelheim Animal Health

Biosecurity is top of mind for many dairy and beef producers, following the discovery of avian influenza virus Type A (H5N1) in dairy herds for the first time this spring.

"This discovery has brought a higher level of awareness for producers to take biosecurity seriously, and to take proactive

steps to protect their animals and their business," said Joe Gillespie, DVM, Boehringer Ingelheim.

Developing and implementing a biosecurity action plan can help limit the potential access of pathogens coming in or going out of your operation. Dr. Gillespie recommended the following four tips to help you get started:

Start with the basics

"A biosecurity plan doesn't have to be complicated," asserted Dr. Gillespie. "If you've considered what your risks are and have worked with your herd veterinarian to develop a plan that helps reduce those risks, that's a great start, and you can build on it over time."

Having a plan for new animals arriving on the farm is a good first step to help reduce the chance of pathogens being brought into the farm via animal movement. Work with your herd veterinarian to develop protocols for testing and quarantining animals to reduce the risk of introducing new pathogens to the existing herd.

Another biosecurity basic is limiting nonessential access to animals and facilities. "If you're not an essential part of the production team, there should be no need for you to be in with the animals," said Dr. Gillespie.

If visitors do need to be in with the animals, provide disposable footwear, disposable clothing covers and other precautions that limit the ability for a pathogen on their person to spread throughout the operation. Require anyone coming onto the farm to check in with the office, so you have a way to track who's coming and going and manage traffic flow.

Implement employee training

Once you have a biosecurity plan in place, it's important to maintain that plan and regularly train employees on protocols.

"Training employees on biosecurity protocols at least quarterly helps strengthen their understanding of the plan and their observation skills to help them identify risks," Dr. Gillespie stressed.

Review your farm biosecurity plan with your herd veterinarian annually, when significant changes to your operation happen or when your risk level increases. For example, you may need to adjust your plan when building new facilities; exploring new, diversified market opportunities; or when the disease risk is elevated.

Use your resources

There are many industry resources available to help you build a biosecurity plan. Dr. Gillespie recommends starting with your state Department of Agriculture or Animal Health Department. Making connections and having a plan on file with your state agency can be an advantage if a disease outbreak does occur.

"If you have a biosecurity plan on file, such as a Secure Beef Plan or Secure Milk Supply Plan, your state agency knows you've put forth the effort to understand your biosecurity risk," said Dr. Gillespie. "If there is a disease outbreak, producers with a plan in place will have better access to markets or other avenues to manage their livestock, making commerce easier."

In addition to a biosecurity plan, Dr. Gillespie recommends securing your premise identification number (PIN) or location identifier (LID), if you don't already have one. According to the US Department of Agriculture, this information allows state officials to quickly and precisely identify where animals are located in the event of an animal health or feed safety emergency.

Cargill Invests \$1 Million in Research on Methane Reduction in Cattle

by Maggie Malson, Bovine Veterinarian

In an effort to help fund research studying sustainable animal agriculture practices and reducing the environmental impact of the beef industry, Cargill has issued a \$1 million grant to Colorado State University (CSU) and the university's AgNext research program.

"Working closely with industry partners like Cargill, researchers, and producers, AgNext is helping develop innovative, scalable solutions that move the livestock industry toward a more sustainable future," said Dr. Kim Stackhouse-Lawson, director of AgNext and professor of animal science at CSU. "An important part of that is developing robust baseline greenhouse gas emissions from cattle."

In a release from the company, Cargill states the \$1 million grant will address a critical agricultural challenge: enteric methane emissions from feedlot cattle, which are naturally produced during the digestive process.

While current USDA guidelines rely on assumptions about the effects of different feeding strategies on methane emissions, such as grain processing combined with other feed additives, AgNext will conduct several experiments to collect empirical data to support those assumptions.

Studies will take place at Colorado State University's Climate Smart Research Facility during the next two years.

The research will help determine the impact of different ingredients and additives in cattle diets on enteric methane emissions in beef steers fed typical finishing rations. It will also explore the additive effect of these ingredients and additives to determine if additional methane reduction is possible.

"Cargill is committed to working with researchers, farmers, and ranchers to advance creative sustainability ideas and accelerate best-in-class conservation practices within the industry," said Eliza Clark, Cargill Protein & Salt Sustainability Leader. "The knowledge generated from this innovative research will pave the way for testing new technologies in cattle feeding and continue to improve the reduction of greenhouse gas emissions in the beef supply chain."

Tyson Picks Five Supply Chain Startups for Partnerships

The venture capital arm of poultry giant Tyson Foods has chosen to partner with five food sector startups exploring supply chain innovations.

Tyson Ventures selected the five firms from among 12 participants — from seven states, Canada, and the United Kingdom — in the company's third annual "Demo Day" pitch event, organized with the goal of fueling innovation in the food sector. This year's event was focused on supply chains. In a statement, Tyson said that it is seeking to position itself as the "strategic partner of choice" for top innovators pursuing breakthroughs that can help Tyson enhance sustainable practices, transparency, efficiency, and the highest quality standards.

"Transformational solutions come from all over, and to see so much strategic potential in one place was inspiring," said Heidi Solomon, Tyson Foods vice president of global strategy. "When protein supply chains become more efficient, we can all do more to feed the world like a family and fulfill our corporate mission. The global reach and scale of Tyson Foods can help these companies apply their groundbreaking solutions to make a difference."

The startups offered Tyson partnerships are:

- Acoustic Extra Freezing (Paradigm Labs), which manufactures freezing equipment using acoustic waves to create nano-sized ice crystals, preserving food quality, taste, and texture.
- JLE Truckwash, which provides fleet cleaning solutions customized for distribution centers and trucking terminals.
- Orderful, a modern electronic data interchange platform that allows retailers to integrate once and start trading with partners in nine days or less.
- Pactum AI, a SaaS negotiation solution that enables enterprise companies to optimize value by automating supplier negotiations through AI-driven processes.
- SnoFox, a software platform focused on optimizing system performance, maintenance activities, and energy usage for industrial refrigeration. ■

Understand the role of vaccines

Vaccines play an important role in protecting cattle from common everyday health challenges, such as bovine respiratory disease. However, vaccines alone aren't enough when it comes to a comprehensive biosecurity plan. "Having animals vaccinated and immunized is important, whether you're building a biosecurity plan or not, but many transboundary diseases don't currently have vaccines available," noted Dr. Gillespie.

Transboundary animal diseases (TADs), like foot-and-mouth disease and avian influenza viruses, are highly transmissible livestock diseases that can cross borders and spread quickly. TADs pose a serious threat, endangering animal well-being, and affecting international trade and global food security.

"Implementing a biosecurity plan that assesses and prepares you for both the everyday and the less common, but potentially deadly, pathogens will help you protect your business no matter what comes your way," concluded Dr. Gillespie.

Talk with your herd veterinarian today for more information about biosecurity plans and protocols. ■

Juniors *GO* DIGITAL

ASA Publication, Inc. aims to serve each member in the best way possible, ensuring that the educational material, news, Association updates, and other relevant content reaches everyone. Recognizing that digital communication allows access to information anytime, anywhere, and is the preference for many young individuals in the beef industry, the ASA Board of Trustees recently passed a resolution that will allow more effective communication with junior members.

What does this mean? Beginning with the February 2025 *Register*, all AJSA members will automatically receive a digital version of each issue. Here's what you need to know:

Digital Access Anytime, Anywhere

Junior members can enjoy the convenience of accessing *the Register* online, ensuring they're always in the loop with the latest content.

Email Notifications

Email alerts will be received each time a new issue is released, guiding junior members to the online version.

Social Media Access

The Register will also be available through AJSA's social media channels, providing another convenient platform for junior members to access and engage with the Association's happenings.

Easy Magazine Preferences

Prefer a printed copy? No problem. Junior members can easily update their magazine preferences by visiting Herdbook.org, navigating to "My Account," "Update Account," and selecting "Request Paper Magazine."

While the transition to digital won't officially begin until 2025, we encourage AJSA members who prefer a printed copy to update their account settings now. This ensures those members will continue to receive printed copies of *the Register* without interruption. New junior members will have the ability to select their magazine preferences when completing the junior membership application.

The Register and *SimTalk*, including years of back issues, are also available for viewing at simmental.org. Like junior memberships, each adult membership also receives *the Register*, which is mailed nine times annually. Due to the family nature of the cattle business, some households may receive multiple paper copies of *the Register*. If you wish to receive fewer copies, please email register@simmgene.com with the request.

To opt-in to receiving printed copies of the Register, follow these steps:

- Step 1: Log into your Herdbook account.
Step 2: In the "My Account" tab, click "Update Account."

The screenshot shows the Herdbook account page for account number 187289. The page is divided into sections: Account Information, Telephone Numbers, Balance, and Mailing Address. The 'Update Account' button is circled in pink. A pink arrow points from the 'Update Account' button to the 'Request Paper Magazine' checkbox in the 'Digital Preferences' section.

- Step 3: Check the "Request Paper Magazine" box if you wish to receive printed copies of *the Register*.

The screenshot shows the 'Digital Preferences' section of the Herdbook account page. The 'Request Paper Magazine' checkbox is checked, and the 'Update Account' button is circled in pink. A pink arrow points from the 'Update Account' button to the 'Request Paper Magazine' checkbox.

- Step 4: Click "Next" and lastly, "Final Submit." ■

AMERICA'S COW

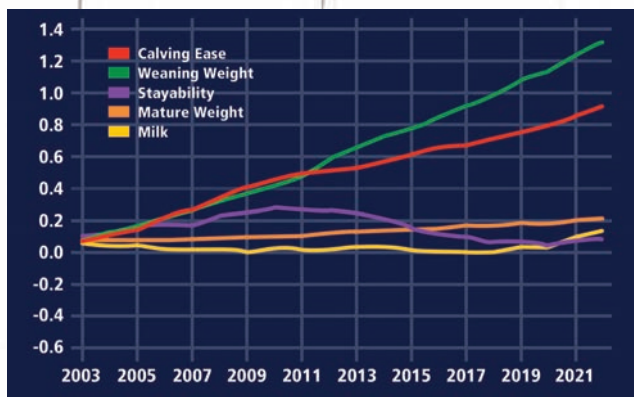

Simmental, SimAngus™, SimAngus HT, and Simbrah.

Meet America's all-purpose cow – gentle and consistent, with calves that give the heterosis boost commercial cattlemen need to stay **profitable**.

Simmental cows set the bar for fertility, weaning weights and exceptional calving ease suited to a variety of environments. Simmental cows are **adaptable**, built to last in heat, fescue or high altitudes.

Maternal Trait Genetic Trends

Purebred Simmental in past 20 years

Simmental genetics bring calving ease, early growth, and cow longevity while keeping feed costs at a minimum.

Breed	Mature Cow Wt.
Hereford	1,419
Angus	1,410
Red Angus	1,409
Simmental	1,404

Source: USDA MARC

\$All Purpose Index (\$API)

predicts cow herd profitability using valuable traits like cow longevity (STAY) and calving ease while keeping pressure on terminal traits.

Compare the profit potential of two Simmental bulls using \$API

- 1 Bull A's \$API = \$120 and Bull B's \$API = \$180
- 2 Breeding 25 females/year
- 3 Used for 5 years

Bull	1 \$API		2 # Females per year		3 # years using the bull		Profit Potential
A	\$120	X	25	X	5	=	\$15,000
B	\$180	X	25	X	5	=	\$22,500
Difference							= \$7,500

Just like an EPD, compare two bulls to see the expected difference in profit. Bull B is likely to result in direct revenue and expense savings of an additional \$7,500 over the course of five years. Plug in your numbers for 1, 2, and 3 to compare your potential earnings.

MORE MEANS MORE

More carcass weight, live weight, muscle and marbling. More **profit**.

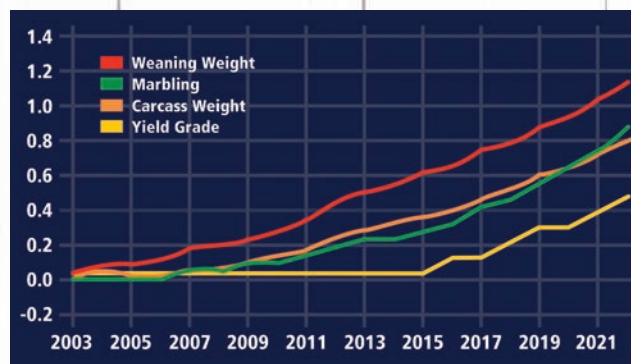

Simmental calves reliably perform in the feedyard – with better growth, better structure and fewer health problems. Simmental cattle add pounds without sacrificing marbling.

Backed by the most comprehensive beef cattle genetic database, the **American Simmental Association** offers commercial producers more selection and marketing tools than any other breed association.

All to strengthen your bottom line.

Terminal Trait Genetic Trends

Purebred Simmental in past 20 years

\$Terminal Index (\$TI)

predicts profitability when all calves are harvested.

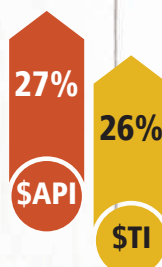

Trait	Simmental rank compared to other Continental breeds
Marbling	First
Carcass Weight	Second
Back Fat	Second
Post Weaning Gain	First

Source: USDA MARC

Simmental cattle bring marbling and growth without too much fat. Simmental genetics perfectly complement British strengths and weaknesses for an ideal carcass.

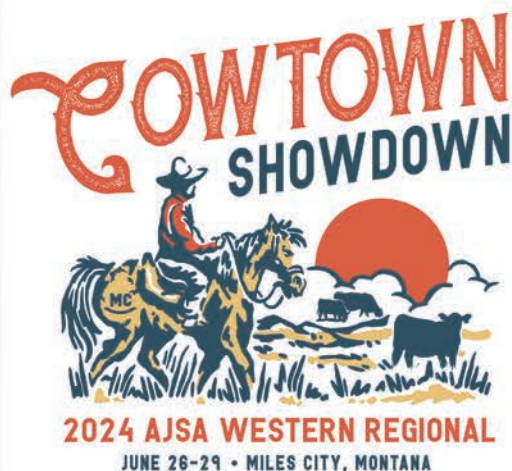

Did You Know?

◆ According to the National Association of Animal Breeders, Simmental ranks second for semen sales compared to all other beef breeds, and in recent years, the percentage of semen sold in the US from Simmental bulls has grown by 35%.

◆ \$API increased 27% and \$TI increased 26% in the last 20 years. This translates to an average increased profit of \$3,375 per bull when used to sire replacement heifers and harvesting remaining calves or \$2,000 when all calves are harvested.

Bridle Bit Recharge K256
ASA# 4058272
CMP Class of 2024

If Beef Is Your Business

The American Simmental Association Carcass Merit Program (CMP) is the beef industry's most demanding and informative young sire test. The program is a hallmark of ASA breed improvement for economically relevant carcass traits. Commercial producers play an integral part in this project.

American Simmental Association

To learn more about the CMP visit www.simmental.org, then click Carcass Merit Program under the Commercial tab.

Questions, contact cmp@simmgene.com for more information regarding this program.

Participants receive:

- ◆ \$200 for each AI-sired calf with carcass information
- ◆ Free semen on top young herdsires
- ◆ Free ASA Genetic Evaluation on your cow herd
- ◆ Free genotyping on terminal progeny
- ◆ Keep any or all replacement females

Become a Carcass Merit Program test herd today

*The CMP is a structured young sire progeny test. Participating cooperator herds will random sample their cow herd with CMP semen, and the resulting male (or female) progeny will be harvested with individual carcass data gathered. ASA Staff will work with cooperator herds to provide bulls that fit the general criteria of your management program; however, only bulls nominated into the CMP program may be used. Producers are encouraged to be somewhat proficient in Microsoft Excel for accurate and consistent record-keeping.

The Proof is in the Progeny

A young sire test such as the Carcass Merit Program (CMP) serves two main purposes:

- Earliest progeny proof attainable on young sires.
- Commercial producers sample promising young bulls for free.
- Reward-based program for commercial producer involvement.

NO LIGHTWEIGHTS

SimGenetics
PROFIT THROUGH SCIENCE
American Simmental Association

Simmental calves are champions of the scale.

They reliably outperform straightbred calves in the feedyard – with better growth, better structure and fewer health problems.

They add pounds without sacrificing marbling, and they earn more with the **IGS Feeder Profit Calculator™**, which factors genetics, health and management into true value.

Want low-risk, high-potential calves with earning capability?

Send all ad materials to: register@simmgene.com or Fax: 406-587-8853

A non-refundable fee of \$50.00 will be assessed if a client does not meet deadlines or if the client commits to advertising and cancels after the deadline or if the ad must be dropped to ensure on time publication.

Advertising materials (including photos) must be in *the Register* office by the dates listed above. *the Register*, which mails by periodicals rate, assumes no responsibility for actual receipt date.

Design Charges

Advertising rates are for camera-ready ads only. Additional design charges will apply to any ad that is designed by ASA Publication, Inc.

Layouts & Proofs

Every effort will be made to provide proofs on all ads — if all ad material arrive in *the Register* office prior to the deadline and a correct email address or fax number is provided.

Advertising Content

the Register and its staff assume no responsibility or obligation to verify the accuracy and truthfulness of advertising copy submitted to *the Register*. However, *the Register* reserves the right to reject any advertising copy or photo which *the Register* deems unsuitable for publication for any reason, including copy

or photographs which are false or misleading. *the Register* assumes no responsibility for the accuracy and truthfulness of submitted print ready ads. Advertisers shall indemnify and hold harmless *the Register* for any claims concerning advertising content as submitted. Advertising containing pedigrees or statements regarding performance must conform to records kept by the American Simmental Association. Copy deviating from official records may be changed as necessary without advertiser consent.

Editorial Policy

Opinions expressed are the writers' and not necessarily those of *the Register*. Photographs are welcome, but no responsibility is assumed for material while in transit or while in the office.

Terms

All accounts are due and payable when invoiced. Interest charges of 1.5 percent per month (18 percent APR) will be added to accounts 30 days past due. If an account becomes 60 days delinquent, all ASA Publication, Inc. work may be suspended until full payment is made. After review by the ASA Executive Committee, ASA privileges may be denied to those with accounts over 90 days delinquent.

YOUR DATA. HIS FUTURE.

LIKE IT OR NOT — WE KNOW THE TRUTH.

Data drives our beef decisions today. Data will drive it even more tomorrow.

So, how do you get maximum genetic awareness at a tolerable price point?

One on one consultation and multiple pricing options allow ASA's Total Herd Enrollment to meet your family's needs. Squeeze every drop of genetic knowledge from your herd to give your kids and grandkids the greatest chance at raising their own families in the beef business. There are options available to meet the needs of almost any production system and they can work with any breed type.
